# Fireman's Gym Sandbox Cover Installation Instructions

Unfold Sandbox Cover and note “snap backs” that have been fastened along the edges. You will be screwing 10 “snap studs” (provided) into the top edges of the Sandbox with a Phillips head screwdriver. The result will be a Sandbox Cover that can easily be fastened and unfastened.

See illustration below. Center and place the Sandbox Cover over the Sandbox. Mark the location of each “snap stud” to be installed by tapping the head of the “snap backs” very gently with a hammer, leaving a small identifying mark. Make pilot holes at the marked locations and screw the “snap studs” in until the base is flush with the wood. There are 3 snap-studs on each end and 2 additional on the each side.

Always install the “snap studs” so that the Sandbox Cover will be straight and taut when it is in place. This will result in a neat and trim appearance, and the fabric will wear better if it is tight.

**ALWAYS** put enough sand in your Sandbox so that the Sandbox Cover is resting on the sand when it is in place. If you do not, children will walk or crawl on the Sandbox Cover and tear the “snap backs” out of the fabric. Your Sandbox Cover is **not** designed to bear the weight of a child; damage to your Sandbox Cover as a result of installing it on a sandbox that does not have enough sand in it is **not** covered under warranty.

Sandbox Cover rolls up for easy storage with tie-up straps at one end.
